# campusM Product Integrations Improve IT and Student Experiences

**University IT Services face challenging demands on their time and resources.**

Most university organizational processes require IT intervention and support. Every change to the technology stack, every request for student data, every new email issued is handled by IT Services. IT teams maintain the dozens of systems used by their institutions, operate help desks and deliver training sessions, prevent cybersecurity attacks, and lead innovation initiatives. The list goes on.

At Ex Libris campusM, we know how busy your IT Services is. Our goal is to make it as easy as possible for IT to configure and maintain the campusM app, so that they can continue to focus on value-add tasks while still offering students an extraordinary mobile experience.

campusM product integrations are the key to our streamlined, no-code admin experience. Product integrations integrate with 3$^{rd}$-party vendors to give students on-the-go access to critical systems such as Learning Management Systems, Timetable and Events.

Using campusM out-of-the-box product integrations, IT teams have the flexibility to deploy and make changes to backend integration points quickly, with minimal disruptions to the app's look and feel.

Our new hyper-connected data model automatically merges data from disparate product integrations, no additional implementation required. By connecting the dots between systems, campusM helps students to get things done by showing them everything they need to know about their day on campus within a single app interface.

Use campusM product integrations to put resources, signposted services and digital tools in your students' hands. With campusM, you can empower students to make smarter decisions – and reduce calls to the IT helpdesk.
